

How to GitHub

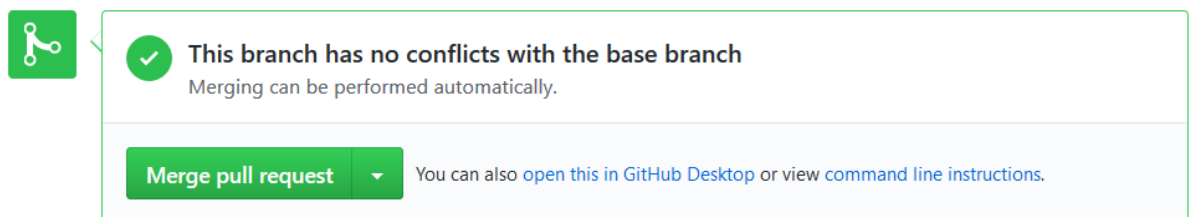

1. Create a GIT folder
2. Open git bash and navigate to the your GIT folder
3. Use “git clone <https://github.com/rlennon/appcl.git>” to clone the files from github.
4. Navigate to appcl folder. “cd appcl”
5. “git checkout dev” or “git checkout documentation” Depending on where you are working from.
6. Create your branch. “git checkout -b BranchNameHere”

(The branch name should be related to the work being done not your name)
7. Add files to the appcl folder.
8. “git status”
9. “git add .”
10. “git commit -m “What you’ve done””
11. “git push origin BranchNameHere”
12. Open your browser and go to github, open your branch and click “New Pull Request”.
13. Change the first box to where you want to merge your branch, so it should look like this:

And click create new pull request.

14. There should be a box that looks like this:

Click Merge pull request.

15. Once completed delete the branch you were working on and create a new one each time after the pull
16. Delete the GIT folder created in part 1
